**Subject: Boston University Medical School Student Project: Logan Airport and Community Impacts**

Dear Community Members,

Thank you for attending our Community Environmental Health class on February 19th. We all enjoyed listening to the concerns of community members and are looking forward to getting involved.

We are interested in working with the communities of East Boston and Somerville. Many of you voiced concerns with airport-related noise and health outcomes. Our project will be looking at noise events and sleep quality and sleep disturbance. We wanted to get the dialogue started and were hoping for your involvement in the project. Part of the project will require recruiting community members to complete surveys and conduct some noise sampling. We are in the process of completing the study design proposal.

Could you please let us know your interest at your earliest convenience and we can plan accordingly to move forward with the project.

Thank you in advance,

Melissa Rodriguez-Vodak, Sharon Lee, Kirby Valentine & Hanan Alzaim
