Subject: [SomPedTransit] Better street design features

Hello,

I spent some time looking at common street designs in the Netherlands, and put together some comparisons between their streets and streets in Somerville. Its good to see examples of safe street design, and to have references to infrastructure that we can advocate for in Somerville.

I'd be happy to have a discussion about the specific features, or how we can get the city to start testing some of these designs on our streets. Especially now, as the work on the Holland/College resurfacing designs are ongoing.
